Hypervault

Password & Data Manager for Business.

Over Hypervault
The digital safe for companies.

Hypervault is a Saas solution that allows companies to secure and share any type of confidential data as a team.

It was developed from the need to be able to secure more types of sensitive data in a structured way, both for our own organization and for our customers.

Just think of database connections, computer accesses, FTP credentials, e-mail settings, API or license keys, device information, but also contracts, patents or incorporation documents or personnel data ... There is much more confidential data in a company than just online passwords.

The current password managers are limited in this respect and are mainly focused too much on the use by a single user instead of teamwork.

Shift in mindset
European companies are also increasingly cautious when it comes to storing and securing confidential data.
Partly due to the GDPR legislation, companies are increasingly monitoring who their data is stored and managed.

The decisions of government authorities in Germany and Italy, already requiring companies to keep as much data as possible within the EU, are a clear indication of what lies ahead. Awareness in the business world is increasing and the growth expectation in the market for cybersecurity solutions is exponential.

Hypervault is the first European (Belgian) product to offer a digital safe for companies and a strong alternative to the classic password managers.
Our goal? Offering companies a simultaneously user-friendly and super-secure platform to manage their confidential data.

In order to realize our growth, we strongly believe in close cooperation with IT service companies. In this brochure we would like to explain how we want to tackle this in concrete terms.

We are looking forward to a nice and long-term cooperation!

Glenn Van Croonenborch
CEO Hypervault

Hypervault currently has customers in more than 20 countries (EU and Non-EU).

The highest security degree

All data is encrypted according to AES-256 bit encryption. Your data is encrypted and decrypted locally on your device using your master password (Zero-knowledge).

All confidential data is hosted on servers located within the EU. Hypervault is pen tested on a regular basis, periodically and with each major or critical release.

## Secure access with itsme®
For Belgian residents

Use the itsme® app via your smartphone to log in to Hypervault. itsme is only supported for paid subscriptions.

Password manager

All your online passwords are safe and secure for good.

Log in quickly and easily to your most used websites or online accounts thanks to the Hypervault browser extension, available for Chrome and Edge.

The built-in password generator creates strong, secure and unique passwords for you.

Workspace   🔓 Generate password

Use this tool to generate a safe, random password

Data templates

The greatest asset of Hypervault and the beating heart of the application: predefined data categories with specific fields ensure clarity and uniformity.

In addition to the existing categories, it is also possible to create your own templates.

🔒 Wachtwoorden   Klantgegevens   Documenten   ✉ E-mail instellingen

FTP-gegevens   Apparaatinformatie   🗝 API Keys   Software licenties

🗄 Database informatie   Computer accounts   Netwerkinformatie   **Of maak je eigen categorie**

Team options

Carefree sharing of data with the rest of your team. Invite your colleagues or your customers to securely share sensitive data.

Control who has access to what data
Keep full control. With a detailed rights and role system, you determine who has access to which data.

Workspaces & folders

Use multiple workspaces to manage different customers or enterprises. Each workspace is a collection of users and vault items. Handy to keep things neatly separated. Each workspace also has 1GB data storage.

Organize your data in a familiar environment with folders and subfolders. Flexible and clear. Group related data and waste less time searching for information.

Pricing

Price per license (excl. 21% VAT)

€4
Monthly subscriptions

€39,7
Yearly subscriptions

Important: Each workspace is a separate collection of licenses and users. Licenses cannot be transferred between workspaces.

Commission

50%
On first invoice

+

25%
On every subsequent invoice

Example monthly contract
20 licenses at €4 per license per month = €80 / month. First commission of €40, then €20 per month.

Example yearly contract
20 licenses at €39.7 per license per year = €794 / year. First commission of €397, thereafter €198.5 per year.

Commission is valid as long as there is an active paying subscription to the workspace.

Help your customers on their way

DIY

Do-it-yourself: give customers the opportunity to sign up and create a workspace themselves.

DWY

Done-with-you: Take your customers by the hand when setting up Hypervault.

DFY

Done-for-you: completely set up the environment for your customer.

Regardless of which method you use, the Hypervault team is always ready for extra support.

Our story

The idea of building Hypervault started mostly out of frustration. Our own digital agency could not find a good solution for managing and sharing confidential data. Both for our data and for those we managed for our customers.

Passwords, customer data, documents, files, e-mail settings, database information, ... the list does not stop. So we developed a solution ourselves and we are quite proud of that today.

By listening carefully to other agencies, IT and security and companies from countless other sectors, we knew exactly which pain points to focus on and how to develop Hypervault along the way. Feedback from our customers is still the driving force today - and always will be.

Today we are a fast growing Saas start-up with our headquarters in Antwerp, Belgium.

Confidential data in EU, developed in Belgium

Hypervault is fully controlled and developed from Belgium and with the ambition to provide a solution for companies across Europe.

We are a European alternative to password managers such as Lastpass, Dashlane and 1Password, with the added difference that Hypervault can store more types of sensitive data.

Let's get started!

Create a reseller account via our website and introduce your customers to the ease of use of Hypervault.

You will receive a unique link as soon as the application is complete. This link should be used at all times when creating new customers. We also always recommend sending an email to support@ hypervault.com for the first 3 onboardings for correct follow-up.
